PROJECTS

5th semester

Cycle Rental System | *Technologies: HTML , CSS , JavaScript*

- Our platform allows users to rent cycles from their nearby locality , which they can use to ride as per their convenience
- The system provides with an inbuilt tracking space which users can use to find the best routes to reach their destination
- Rewards the Users with Tokens when they complete specific milestones , it also comes along with Fitness Tracking Tools
- Allows seamless payment through inbuilt online payment gateways

Landing Website For PC Gamers| *Technologies: HTML, CSS, JavaScript, Google API*   *4th semester*

- Our landing website serves as a centralized platform for accessing a diverse range of PC games. It acts as a gateway for users to discover, purchase, and play games seamlessly within a unified interface.
- By implementing a tiered pricing model, we strike a balance between offering free content and monetizing premium games, thus creating revenue streams while ensuring accessibility for all users.
- Embracing emerging technologies like virtual reality (VR) or augmented reality (AR) could differentiate our platform and provide immersive gaming experiences, setting us apart from competitors.
- Continuously sourcing and integrating new games will keep our platform fresh and engaging, attracting a wider audience and encouraging return visits.
